***Claim Rejections - 35 USC § 102***

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. 4681423.

Referring to Fig. 5, 1:54-60 ("column:lines"), and 3:8-49, US'423 discloses a copier that initiates warm-up when placement of an original is detected, and "second control processing" according to manually set parameters, as claimed.

***Claim Rejections - 35 USC § 103***

Claims 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'423.

While US'423 does not explicitly disclose detection of transmission date (fax mode), fixing control based on previous processing data, automatic mode selection based on previous fax or copy usage, or a manual override, these do not patentably distinguish the claimed invention from the prior art. It would have been obvious to detect transmission date (fax mode) and implement an automatic mode selection based on previous fax or copy usage since fax is a conventional alternative mode of multifunction copiers, to fix control based on previous processing data since fixing history is conventionally used to determine heater operation, and to implement a manual override since such also is conventional where the automatic mode does not accommodate every contingency.
